

Project Scope

Caremax Healthcare offers:

- Comprehensive medical, mental, and social care
- Easy access to services, including transportation

Project Objectives:

- Enhance patient satisfaction
- Reduce departmental costs

Mediroutes and Lyft System Improvements:

- Cost reporting dashboard
- Trip constraint integration
- Upcoming features inquiry
- Improving customer service

Problem

Dispatchers manually devise patient transportation routes on Mediroutes based on:

- Familiarity with designated region including certain CareMax clinics
- Adherence to company constraints

Company Constraints:

- Maximum 1 hour trip duration per patient
- Maximum pickup of 1 hour before appointment time

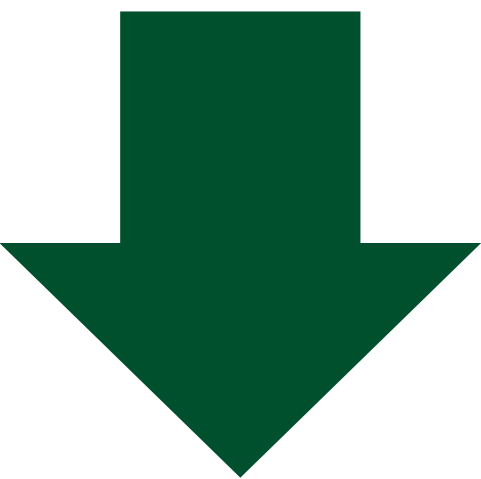

Challenges of manual process include non-compliance with constraints which results in patient dissatisfaction and potential increase in ride expenses

Below you can see frequency in which constraints are violated:

15.65% of patients are in vehicle longer than 1 hour

24.14% of patients are picked up over 1 hour before appointment

21.79% of patients reported issues with timing of transportation services

Leads to a decrease in patient satisfaction and increase in patient wait time

Data Collection

Methods:

Utilizing R Models:

- Facilitated extraction of variables and data
- Enabled comprehensive analysis

Associate Interviews:

- Provided valuable insight into office operations such as dispatching procedures

Customer Satisfaction Survey:

- Illuminated customer perspectives on aspects such as transportation timeliness and ineffective communication

Software Representative Meetings:

- Consulted representatives regarding company’s software usage in Lyft Concierge and Mediroutes
- Discussed potential improvements compared to similar companies

Recommendations

Mediroutes

Implement zip code groups for efficient dispatching process

Define and input violation parameters for dispatchers to batch routes and streamline operations

Utilize revenue report to enhance financial insights (input completed cost analysis breakdown into software)

Lyft

Renegotiate cancellation costs for improved cost efficiency

Inquire about upcoming added features including automated text notifications to be sent to drivers scheduled for CareMax

Enhance customer service by providing additional training to drivers and increase wait time for patients (due to age, mobility issues, etc)

Results

Mediroutes

- Dispatcher split by region which hinders software optimization suggesting need for system improvements
- Labor hour cost saved by implementing optimization estimated to be **\$124,000**
- Transportation fleet data revealed **violations** in time constraints

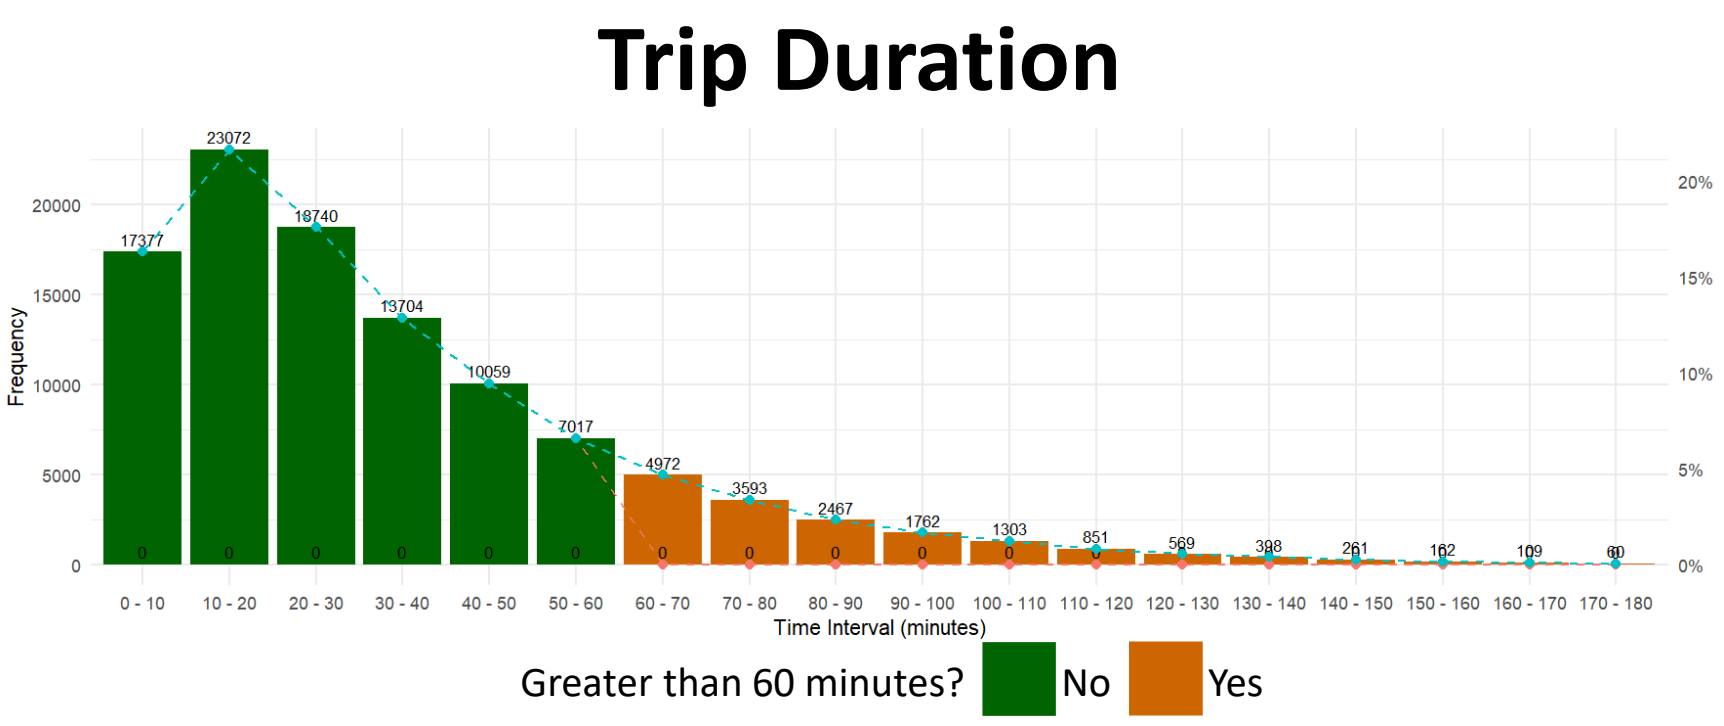

Lyft

- Identified Lyft cancellation fees over **\$20,000** in South and Central Florida
- Surveyed patient satisfaction with noted issues in **communication** and **lack of assistance** leading to decrease in satisfaction

Estimated Labor Hour Cost Saved

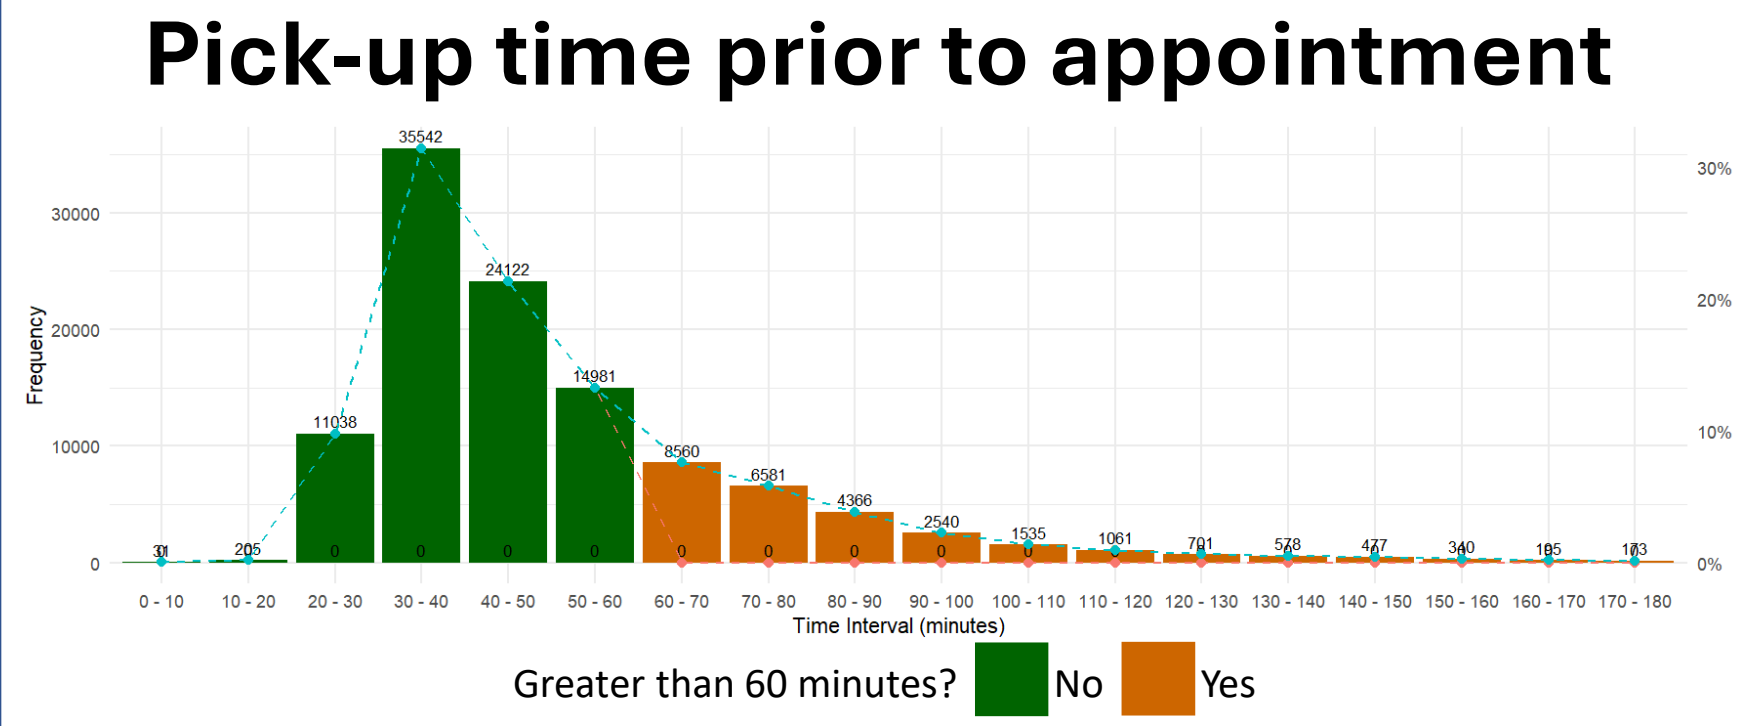

Process	Cost Saved (\$)
Current Process	\$174,236
Optimized Process	\$50,260

Trip Duration

15.65% of patients remained in the vehicle for longer than one hour

Pick-up time prior to appointment

24.14% of patients were picked up more than an hour before their appointment

Acknowledgments

We extend our sincere gratitude to our professors, Dr. Miville and Dr. Buitrago, and our dedicated advisor, Dr. Omachonu, for their invaluable guidance and support throughout the project. Special thanks to Corina Pepe for her weekly meetings and assistance in facilitating our progress. We are grateful to Francisco Reloba, David Delfino, and Onel Chaviano for welcoming us and providing insights into the transportation department. Lastly, heartfelt thanks to our friends and family for their unwavering support and encouragement throughout this journey.
